Allan Rose

Product Manager | Fintech, B2B SaaS & AI

+91-9326482267 | pmallan.rose@gmail.com | LinkedIn | Portfolio

Fintech-focused Senior Product Manager with 6+ years shipping products that operate at scale, including payment infrastructure processing 40M+ monthly transactions. Operates at the intersection of payments, conversational commerce, and AI-augmented tooling, with hands-on experience across the full product lifecycle from 0-to-1 launch to enterprise adoption. Known for translating complex technical systems into user-centric products and driving measurable outcomes across B2B clients in payments, metro infrastructure, and retail.

Experience

Zosma Ai | Product Manager Nov 2025 – Present

Led product development for WhatsApp-native commerce and payment infrastructure, serving enterprise clients across metro transit, QSR, and retail verticals.

- Launched WhatsApp-based ticketing with split payment functionality for Maharashtra Maritime Board, enabling **20K daily transactions** and streamlining multi-party settlement flows across enterprise payment partners.
- Designed and shipped a WhatsApp-driven ordering journey for Belgian Waffle with end-to-end POS integration, scaling from **0 to 7K daily transactions within the first week** of launch.
- Built a customer segmentation module enabling targeted engagement campaigns for enterprise clients, driving a **9% average uplift in sales** across active brand accounts.
- Architected an AI-powered PRD generation system using agentic Claude workflows with simulated cross-functional stakeholder input, reducing PRD drafting time **from 2+ days to under 3 hours**, enabling faster sprint initiation across product cycles.
- Owned the full integration roadmap for payment gateways, messaging APIs, and AFC systems, delivering integrations supporting **40M+ monthly transactions** across Mumbai Metro, Belgian Waffle, and Tim Hortons.

Crimson Interactive | Product - Business Analyst Nov 2023 – Oct 2025

Functioned as the sole product owner across a B2B SaaS platform serving 80+ enterprise clients, owning the full product lifecycle, roadmap, and a cross-functional pod of 8 engineers.

- Owned end-to-end delivery of an internal client profiling dashboard, from discovery and spec to production, driving an **18% uplift in client conversion rates within one quarter**, adopted by the full internal servicing team across 80+ B2B accounts. Awarded the title of **Upcoming Crimsonite – 2025**.
- Directed a cross-functional pod of **8 engineers** to ship client-facing product features, generating **1,200+ assignments** and measurable revenue contribution across the B2B portfolio.
- Scoped and delivered payment gateway capabilities including split payments, real-time settlements, and multi-currency support, translating direct client feedback into production-ready specifications across 80+ accounts.
- Built an internal automation tool that eliminated manual processing of **35–40 routine daily assignments**, enabling 3 ops team members to redirect effort entirely toward complex, judgment-intensive work, effectively removing a recurring operational bottleneck.

NTT Data Payment Services | Key Account Executive May 2022 – Oct 2023

Served as the primary interface between 132 enterprise clients and the internal product team, bringing payment pain points directly into roadmap discussions and translating client needs into prioritized features.

- Participated directly in product roadmap discussions, championing **12 client-identified requirements** that were scoped, built, and shipped, driving a **7% increase in transaction volume within one month** of deployment.
- Managed a portfolio of **132 enterprise clients**, developing deep domain expertise in payment infrastructure, transaction flows, and operational bottlenecks, knowledge that directly informed a later transition into product management.
- Executed data-driven upsell strategies across the enterprise client base, achieving **15% uptake for partner offerings** through targeted account analysis and needs-based positioning.

Churiwala Securities | Product Associate Nov 2019 – Dec 2021

Early-career role focused on client-facing process improvement and internal tooling across financial services workflows.

- Identified client pain points across service delivery workflows and drove improvements to internal processes, communication flows, and operational handoffs, building early foundations in user-centric problem solving.
- Developed Excel-based automation tools and delivered iterative enhancements to the company website, reducing manual effort and improving the client-facing experience.

Highlights

Kestrel | Founder
White-label SaaS platform purpose-built for SEBI-registered wealth advisory firms — packaging risk profiling, client CRM, ticketing, and e-signing into a single branded product.

- Designing and building a 0-to-1 multi-tenant SaaS product end-to-end — from product vision and PRDs through UI/UX design and full-stack development — with Finavigate Wealth Advisors as the anchor client.
- Architected a modular platform shell that allows each advisory firm to operate under their own subdomain and brand identity, enabling white-label deployment without engineering involvement per client.
- Defined the CRM module data model and Field Builder to be SEBI-context-aware out of the box, giving firms a compliance-appropriate client schema while allowing full customisation without code.

Noetis Ai | Co-Founder & Poduct Lead The Caseroom
AI-powered clinical simulation platform enabling psychology students to practice patient interviews and diagnostic reasoning through interactive AI-driven 3D patients.

- Designed an AI-powered simulation platform where psychology students interact with virtual patients to practise clinical interviewing, diagnostic reasoning, and assessment.
- Integrated LLMs to power patient personas and conversational behaviour, enabling simulated patients to respond dynamically during student interactions.
- Developed 3D patient experiences using Blender for modelling and Three.js for web-based rendering and animation, alongside TTS models for patient voice generation.
- Designed a structured case evaluation framework powered by Jev AI to assess student performance across question quality, completeness, reasoning progression, listening and adaptability, and communication structure.

Smart Budget Tracker — Android App Google Play (Beta)
Solo-built Android app that eliminates manual expense tracking by automatically parsing real-time bank payment notifications.

- Designed and shipped end-to-end solo, from problem identification, PRD, and UX design to user journey mapping and code, delivering a working product to Google Play Store in closed beta.
- Built a notification listener that intercepts bank payment alerts, parses transaction data in real time, and automatically deducts spend from user-defined monthly budgets, requiring zero manual input.
- Modelled legal and privacy implications of handling sensitive financial data upfront by running structured agentic simulations across legal, engineering, and design personas before writing a single line of code.

Skills

Product Management: Product Strategy, Roadmapping, Product Discovery, 0-to-1 Development, Prioritization, Agile/Scrum, GTM Strategy, Stakeholder Management, OKRs, KPI Definition & Tracking
Fintech & Conversational Commerce: Payment Gateway Integrations, Split Payments, Real-Time Settlements, Multi-Currency Systems, POS Integration, AFC Systems, WhatsApp Commerce, API Integrations
AI & LLMs: LLM Experimentation, Prompt Engineering, Agentic Workflows, LLM API Integration, AI Product Architecture, AI Evaluation Frameworks, PRD Automation, TTS/STT Workflows
Technical Architecture & Cloud: REST APIs, Webhooks, System Design Fundamentals, Multi-Tenant Architecture, Data Modelling, AWS Fundamentals, Cloud Deployment
Tools & Technologies: Claude, OpenRouter, MCP, Jira, Confluence, Notion, Figma, Tableau, n8n, Blender, Three.js, Git/GitHub
UX: Wireframing, Prototyping, User Story Mapping, Usability Testing, User Journey Mapping

Education

Bachelors in Financial Markets (BFM) 2021
Smt. M.M.K College of Commerce and Economics

Certifications

AI for Product Managers – Product School (2025)
Business Analysis – Upgrad (2024)
